DESCRIPTORS: *Wind, *Velocity, Measurement,
Meteorological data, Statistical analysis, *Atmosphere

In the climatological processing of aerological material
wind speeds calculated from a number of observations
at the surface equal to more than 300 per month, have
an accuracy of more than 1 m/sec in the lower layers
and 1 to 2 m/sec in the troposphere. For less than 50
observations the accuracy of the mean values in this
instance was 4 to 5 m/sec.
